sonsonic wireless digital CCTV

Finally, the possibility of setting up your own CCTV for home and small office economically and effortlessly is here with another cutting-edge technology gadget from sonsonic – wireless digital CCTV.

Traditional CCTV is costly and difficult to setup as it requires cabling, dedicated video recorder and use analog instead of interference-free digital signal. Once commissioned, it is not easy to re-locate the system as re-wiring is required. Also, configuring the system to view images remotely via internet is also a huge challenge.

Setup is hassle-free and DIY is made possible now with sonsonic wireless digital CCTV. Just plug-in the wireless receiver dongle to the USB port of any Windows equipped PC enable you to view and record images. To go for quick setup, a comprehensive Starter Pack called VM400 is available that consists one each of Indoor Wireless IR Camera (VC40), USB wireless Receiver, CCTV software and other related accessories.

You may opt for Starter Pack VM500 which is exactly identical to VM400 configuration except it bundles with a outdoor use camera (VC50) instead of Indoor use VC40 camera. As each wireless Receiver dongle able to link to a maximum of 4 cameras, you can choose and match either indoor or outdoor camera in any combination up to this maximum.

Deploying proprietary 2.4Ghz digital wireless transmission to ensure distortion free images and robust signal capable to penetrate walls and concrete. Very secure unlike WiFi wireless camera that is easily hacked and unable to prevent illegal intrusion to CCTV system. Furthermore, only sonsonic cameras are compatible with sonsonic wireless Receiver as each camera need to be paired individually to the Receiver with unique ID number.

With wireless connectivity, you enjoy extreme flexibility to meet diverse and special needs limited by your imagination only. This mobility frees up the hassle of cabling and brings the versatility of sonsonic wireless camera to open-space as you are able to locate and re-locate the whole surveillance setup to any location.

Connecting camera wirelessly is a must in situation where the need to place camera between buildings that crosses public road and irremovable obstacles or different office floors is imminent. Laying cable is extremely costly or possibly not legally permitted.

With the alternate power source of using AAA battery apart from AC supply, the camera is well suited for outdoor use with almost no restriction such as location without AC power point. The need for constant re-locating of camera is also made possible now.

Each camera has a highly sensitive microphone to listen and record conversation of the monitored target. Example, it can monitor new born baby that requires constant attention to determine whether the baby is crying or awake.

Mounting the camera is easy. You can use the bundled mobile magnetic desktop stand where the camera can be rotated freely to any desired viewing angle and an additional metal bracket is also included for wall-mounting.

Amazingly, the camera can be setup as a wireless PC webcam. Imagine the convenience of the moving the camera freely when carrying out video communication with your friends and love ones. Extending the application further, it can be configured as an affordable and practical business video conferencing.

The CCTV grade software is user-friendly and feature-rich, monitoring your home, office and warehouse day and night effectively. It allows viewing, recording and audio/video playback filterable by day and time. Motion detection feature activate recording only when motion is detected and with the additional sophisticated motion mask, you can mark specific physical parameter or area to activate recording and trigger alarm.

There are many ways to view images remotely. The handiest method is using Skype video call or any web browser such as IE with your PC or internet enabled handheld device like PDA or Smart phone.

Optional items:

- sonsonic S30 portable USB speaker
- sonsonic cordless touch remote presenter mouse
- sonsonic V800 UPS (extended power backup for camera)
- sonsonic portable power backup for camera
