

Home Surveillance Made Easy

Securing The Digital Home with Sensonic's Surveillance Solutions

VM400 Wireless Digital CCTV Camera

When you're living the digital lifestyle in a home filled to the brim with lavish digital solutions, it just makes perfect sense that you need a digital security system to keep things safe and sound. However, this doesn't mean you have to look into expensive wired digital CCTV cameras, workstations and look for the expensive security experts to install it properly. Thanks to the leaps and bounds in digital innovation, you can now rely on wireless digital CCTV camera systems like Sensonic's VM400 Wireless Digital CCTV Camera kit for your peace of mind.

Consisting of the VC40 Indoor Wireless Camera, a USB dongle wireless receiver, CCTV software, a wall mount and magnetic desk stand, the Sensonic VM400 Starter Pack lets you do all the installation itself. All that is required is a computer to install the software on and an available USB port to install the USB dongle wireless receiver. No messy cables, wires or Ethernet switches required as you can track and record video directly from the connected PC.

Rather than limit you to just indoor video security, Sensonic also has its VC50 outdoor wireless camera which you can purchase as an optional add-on to the package. Each USB dongle wireless receiver can link up to a maximum of four wireless cameras, so you can mix and match between indoor and outdoor wireless cameras. Even two digital wireless cameras are more than enough for a single home, while four offers even more security for large homes with multiple entry points.

Once the software and cameras have been installed, you can then track and record video from your computer through the software or an Internet browser. You can also do remote tracking via a smartphone or through Skype.

VC40 Indoor Wireless Camera

Sensonic's VC40 Indoor Wireless Camera runs on a 2.4GHz frequency for maximum range and reliability. Featuring an infrared filter for low light conditions and a built-in mic, this lightweight wireless camera is made for indoor environment. Powered by four AAA batteries that can last from three to five hours, the camera can also be hooked up to an AC adaptor for continuous power. The camera records video in Motion JPEG direct to your computer and offers a line-of-sight range of 150m.

VC50 Outdoor Wireless Camera

Built tough and more robust, Sensonic's VC50 Outdoor Wireless Camera offers much of the same features as the indoor model. This means that the camera can operate at 150m within line-of-sight, records Motion JPEG video in two resolutions and also comes packed with an infrared filter. It also runs on four AAA batteries, offering three to five hours of battery life, and can be connected via an AC power adaptor for uninterrupted surveillance. Thanks to its tougher casing, the VC50 can withstand the elements like wind, water and rain better. The VC50 outdoor wireless camera is an optional add-on for the VM400 Starter Pack.
